

# BEST PINE BEDDING PELLETS

"Best Pine" is a much drier bedding pellet thanks to being kiln dried shortly after coming off the log. The result is a 5-6% moisture content (vs. 12% for shavings) that facilitates super absorbency of both moisture and odors. One 40 pound bag of "Best Pine" will absorb 162 gallons of urine.

## Attributes

- Eliminates ammonia odor.
- Saves stall cleaning time.
- Less disposal.
- Superior moisture absorption.
- Reduces cost.
- Longer lasting bedding.
- 100% Organic.
- 1 cu. Ft. of "Best Pine" absorbs more than 9 cu. Ft. of shavings.

## How to use "Best Pine"

Using "Best Pine" will change your life as well as the way you clean your stalls. You will have less waste to dispose of when using "Best Pine" as well as more quality time with your horses.

You have less waste because "Best Pine" is permanent. You do not have to remove the wet spots like shavings. You only need to add more "Best Pine" periodically.

There are three different ways you can use "Best Pine":

1. Completely strip the stall and add 10 bags of "Best Pine" for a 12x12 stall. There will be a thin layer of pellets on the floor. As the pellet absorbs the urine, it will begin to expand, doubling in volume in a day or two. After a few days they will be expanded and will supply an ample amount of bedding for your horse.
2. Follow the same procedure and apply water with a hose. This will expand the bedding immediately.
3. Either add a bag of shavings on top of the pellets to give immediate softness or use your old shavings by banking them. Apply the pellets and then cover with your existing shavings.

Now is the hard part: DO NOT REMOVE THE WET SPOTS. Instead, mix any wet spots with the dry bedding. The pellets will absorb the urine as well as neutralize the ammonia odor. Once the pellets have reached full volume and they have stopped expanding, begin to pick out only the very saturated spots.

"Best Pine" is completely safe for composting.
